2. Executive Summary

GuardChain is an independent blockchain ecosystem designed to verify and reward real-world help, safety actions, and community impact.

GuardChain introduces the Proof of Help model: a structured system for documenting meaningful actions, validating submitted evidence, and recording approved impact events.

GuardChain is foundation-stage only. GUARD is not live, and no token contract, presale, staking, or wallet connection exists at this stage.

3. Mission

GuardChain's mission is to build trusted public-good infrastructure for verified real-world contribution.

- Credible impact records
- Transparent verification standards
- Responsible ecosystem participation
- Compliance-aware communication and rollout

4. The Problem

Many positive community and safety actions are difficult to verify at scale. Existing systems can be fragmented, inconsistent, and hard to audit.

- Limited evidence standards

- Inconsistent review processes
- Weak accountability for approvals
- Low portability of impact records

5. The GuardChain Solution

GuardChain provides a utility-first verification framework designed for communities, schools, charities, local projects, and service groups.

- Standardized action submission model
- Evidence-led verification flow
- Documented approval checkpoints
- Transparent impact records for approved actions
- Pilot-stage reputation signals through GuardChain Points

6. Proof of Help Model

Proof of Help is GuardChain's first core model.

1. A person, group, school, charity, business, or community project completes a real-world helpful action.
2. Evidence is submitted.
3. A verifier reviews evidence against defined criteria.
4. Approved actions are recorded as verified impact events.
5. During pilot operations, approved actions may receive GuardChain Points.

Verification highlight: GuardChain is designed for credible evidence handling and clear reviewer accountability.

7. GuardChain Points Pilot

GuardChain Points are pilot-stage ecosystem reputation points. They are not crypto assets, not money, and not guaranteed to convert into GUARD tokens.

GuardChain Points may be used to test the Proof of Help system before any token is created.

PILOT-STAGE ONLY

8. Future GUARD Utility Token Concept

GUARD is intended as a future utility token for participation, verification, ecosystem rewards, and access within the GuardChain ecosystem.

- GUARD is not live
- No token contract exists
- No presale exists
- No staking exists
- No wallet connection exists

9. Draft Tokenomics

Draft planning model (non-final):

Category	Draft Allocation
Community rewards	40%
Ecosystem treasury	20%
Liquidity and operations readiness	15%
Team/founder vesting pool	10%
Partnerships and ecosystem development	10%
Reserve	5%

Draft vesting concept: 12-month cliff and 36-month linear vesting for team/founder allocation.

10. Verification and Governance

GuardChain governance direction emphasizes quality control, auditability, and transparent criteria.

- Submission completeness checks
- Criteria-based evidence review
- Approval/rejection rationale logging
- Exception handling and escalation paths
- Periodic process review for policy improvement

11. Roadmap

Stage 1: Foundation baseline and litepaper publication

Stage 2: Proof of Help pilot and GuardChain Points trial

Stage 3: Platform prototype and operational tooling

Stage 4: Governance and utility readiness assessment

Stage 5: Ecosystem expansion and partner scaling

12. Legal and Risk Disclaimer

GuardChain and GUARD are designed for utility, participation, verification, and ecosystem rewards. They are not promoted as investments, securities, guaranteed-income products, or financial advice. Crypto assets are high-risk and may lose value. Users must do their own research and seek independent professional advice where required.

GuardChain Points are pilot-stage ecosystem reputation points. They are not crypto assets, not money, and not guaranteed to convert into GUARD tokens.
